# THE CD100i CARRY DECK CRANE

## Tight space? No problem!

The Manitex CD100i is our new industrial crane designed to lift loads that can't easily be reached by a traditional crane or forklift. The 10-ton, cab-down crane maneuvers smoothly through cramped machine shops or shipyards and, with its unique outrigger system, can be positioned close to the load. It offers:

- Multiple steering modes (2 Wheel, Crab, Coordinated)
- Powershift transmission with 4 forward - 3 reverse speeds
- Maximum travel speed of 17.9 mph (28.8 kph)

### Other features include:

- Rated capacity: 10-ton (8,2 mt) at 5 ft. (1,5 m) working radius
- Max. boom length: 25.4 ft. (7,7 m)
- Max. tip height: 40 ft. (10,1 m)
- Load Indicator System

### OUTRIGGERS

Lift confidently. Out-and-down outriggers extend adding stability, letting you inch closer to the load.

### OPERATOR AIDS

Work smarter. Greer's Insight LMI system allows the operator quick access to critical data in high-resolution VGA graphics.

### ON OUTRIGGERS

- The tabulated loads are the maximum loads covered by the manufacturer's guarantees. Rated loads for retracted outrigger chart never exceeds 80%. They are given in pounds and include the weight of hook blocks and other hoisting equipment. Their weight must be subtracted from the listed rated lifting capacity to obtain the net load that can be lifted (Also see page 7 for rated load deductions).
- The tires shall be raised clear of the ground and free of crane weight before operating boom or lifting loads.
- All outrigger beams must be extended to the same length; fully extended.
- The crane should be raised and positioned horizontally on outriggers.
- Operating at outrigger positions other than the above is neither intended nor approved.

### ON TIRES

- The tabulated loads are the maximum loads covered by the manufacturer's guarantees. The rated loads never exceed 75% of the tipping load. They are given in pounds and include the weight of hook blocks and other hoisting equipment. Their weight must be subtracted from the listed rated lifting capacity to obtain the net load that can be lifted (also see page 7 for rated load deductions).
- Crane lifting capacities require lifting from main boom head only on a smooth and level surface.
- Crane lifting capacities on tires depend on tire capacity, condition of the tires and tire air pressure. Tires must be inflated to the recommended pressure before lifting (see operator's manual). The recommended pressures are indicated either in the cab or next to the wheels. When handling loads in the structural range with capacities close to maximum ratings, travel should be limited to "creep speed." 2.5 mph capacities are permissible on main boom only, NOT on boom extension.
- For pick and carry operations, the boom must be centered over the front of the machine, the mechanical swing lock engaged and the load must be restrained from swing.
- Do not travel with boom extension erected. Creep: motion less than 200 feet in a 30 minute period and not exceeding 1 mph.

Data published herein is intended as a guide only. Crane operation is subject to the computer charts and operation manual supplied with the crane.
